Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.

Q: What causes heart attacks?

A: Heart attacks are caused by blockage of blood flow to the heart, usually due to clots.

Q: What foods improve heart health?

A: Fruits, vegetables, whole grains, and healthy fats support heart health.

Q: Is stress harmful to the heart?

A: Yes, chronic stress raises blood pressure and increases heart disease risk.

Q: What is ECG?

A: ECG records electrical activity of the heart and helps detect abnormalities.

Q: What is hypertension?

A: Hypertension is high blood pressure, a major risk factor for heart disease.

Q: What are the symptoms of heart disease?

A: Common symptoms include chest pain, shortness of breath, fatigue, and irregular heartbeat. Early detection is important.

Q: How can I prevent heart disease?

A: Prevention includes a healthy diet, regular exercise, avoiding smoking, and regular health checkups.

Q: What is cholesterol?

A: Cholesterol is a fatty substance in the blood. High levels can lead to plaque buildup in arteries.

Q: What is blood pressure?

A: Blood pressure measures the force of blood against artery walls. Normal is around 120/80 mmHg.

Q: How does exercise help the heart?

A: Exercise strengthens the heart muscle, improves circulation, and reduces cardiovascular risk.
